👥 Team update

Key happenings for week 6.

Date	News	Action items	Notes
31/8/2021	• Revised date for the due date for the inception checklist as per our tutorial is now 3/9.	✔ Submission of inception checklist on Github required; @ Danielle Rosenfeld-Lovell to write and push to Github.	• Domain model completed and motivational model also available online to assessor.

🕐 Meeting agenda

Agenda	Meeting notes
Sprint #1 progress.	• At time of meeting the team is on-track to meet requirements of the inception phase of the project. • Revised expectation that we are hoping to be able to produce at least one demonstrable feature on the FE to be able to demo; most of the BE functionality has been implemented (routes, controllers, models for the DB).
Creating a deployable FE	• @ Lam Nguyen Khoa explained POC work he's done towards enabling the FE to be deployed to Heroku from the same Github repository by proxying the backend server. • Intent is to make this a priority item for the team so we can start developing and rapidly testing the FE.
JWT authentication demo	• @ Benedict Jefferson spent some time explaining the way that JWTs have been used to support sessions for our registered users and authentication for a registered user. • Currently there is a working login screen on the FE which functions and will just need some tweaking to meet the design that the team have drafted using Figma.
